

— TAYLORMADE ACADEMY · FREE STARTER GUIDE

THE CREATOR'S AI PLAYBOOK

How to use AI to create, earn, and grow
your brand — even if you've never typed
a prompt in your life.

NELSON TAYLOR

Taylormade Creative · Dallas–Fort Worth

academy.taylormadecreative.net

Welcome. Let's make AI simple.

If AI feels like a fast-moving train you missed, this guide is your ticket on. In the next few pages I'll take you from "I have no idea what I'm doing" to confidently using the three biggest AI tools on the planet.

I'm Nelson Taylor. I've spent 14 years as a working creative in Dallas–Fort Worth — design, photography, video — and now I use AI every single day to create faster, work smarter, and build income. None of it required a computer-science degree. It required knowing **where to click** and **what to say**. That's exactly what you're about to learn.

What you'll walk away with

- **The 3 tools** that matter — ChatGPT, Claude, and Google Gemini — and which to use when.
- **Where to go** in each app (real, labeled walkthroughs of every button you need).
- **The words** — every beginner term decoded in plain English.
- **The prompt formula** that turns "meh" answers into magic, plus copy-paste starters.

A promise

No jargon for jargon's sake. No "you should already know this." Just the shortest path from zero to actually using this stuff today. This is the appetizer — the full meal lives inside Taylormade Academy.

What is AI, really?

Forget the sci-fi robots. The AI you're going to use is simpler than that: it's a **brilliant assistant you talk to by typing.**

Tools like ChatGPT, Claude, and Gemini are called **chatbots** or **AI assistants**.

You type a request — a question, a task, an idea — and it writes back an answer in seconds. It can draft an email, explain a topic, brainstorm names, write captions, plan a trip, summarize a document, or help you code. You "chat" with it like you'd text a very fast, very well-read friend.

It reads & writes

Emails, captions, scripts, summaries, ideas — text in, text out.

It explains

Ask it to break down anything "like I'm 10." It's a patient tutor.

It creates

Some tools also make images, analyze photos, and read files you upload.

One thing to remember

AI is confident — even when it's wrong. It can "make things up" (you'll hear this called a **hallucination**). So for facts that matter — names, dates, numbers, medical or legal info — always double-check. Treat it like a sharp intern: incredibly helpful, fast, and worth a second look.

The mindset shift: you don't need to "know everything." You need to know how to *ask*. That's a skill — and it's learnable in an afternoon.

Meet your three tools

They all do the same core thing — you chat, they help. Here's the cheat sheet for which is which, and where to start.

OPENAI

ChatGPT

The all-rounder everyone knows. Great first stop. Writes well, makes images, browses the web, and has a huge ecosystem. Free plan is generous.

Go to: chatgpt.com · **Best for:** general writing, images, getting started.

ANTHROPIC

Claude

The thoughtful writer. Loved for natural writing, long documents, and careful reasoning. Clean, calm interface. Excellent free plan.

Go to: claude.ai · **Best for:** long-form writing, reading big files, nuanced help.

GOOGLE

Gemini

The Google native. Built into the tools you already use (Search, Gmail, Docs). Strong with images and live info. Free to start with a Google account.

Go to: gemini.google.com · **Best for:** Google users, quick research, images.

My advice: pick *one* and get comfortable. They're 90% the same to use. Start with whichever name you already trust — you can't pick wrong.

Using ChatGPT

Go to **chatgpt.com**, sign up free, and you'll land on a screen like this. Here's every button that matters.

- 1 New chat** — start fresh anytime. Each chat keeps its own memory.
- 2 Model picker** — leave it on the default to start.
- 3 The prompt box** — this is where you type. The whole game.
- 4 Send** — click the arrow or press Enter.

Try it now: type *"Explain what you can help me with, in 5 bullet points."* Hit send. Congrats — you're using AI.

Tip: the  next to the prompt box lets you upload a photo or file to ask questions about it.

Using Claude

Go to **claude.ai** and sign up free. Claude's screen is calm and clean — same idea, friendlier room.

1 **New chat** — top-left, start a fresh conversation.

2 **Model picker** — default is great for beginners.

3 **Prompt box** — type your request right here.

4 **Send** — the up-arrow, or press Enter.

Claude's superpower: drop in a long document or a messy block of notes and ask, *"Summarize this and pull out the 3 action items."* It shines at reading and writing.

Using Google Gemini

Go to **gemini.google.com** and sign in with your Google account — you already have one if you use Gmail.

1 **New chat** — clears the slate for a new topic.

4 **Send** — arrow or Enter.

3 **"Ask Gemini" box** — your prompt goes here.

5 **Image button** — add a photo to ask about it.

Gemini's edge: it's tied into Google. Ask for fresh, up-to-the-minute info or say *"Help me draft this in Google Docs"* and it plugs right in.

The words, decoded

You'll see these everywhere. Here's what each one actually means — no PhD required.

Prompt

What you type to the AI. Your request, question, or instruction.

Model

The "brain" doing the work (e.g. GPT-5, Claude Sonnet, Gemini). Newer = smarter, usually.

Token

How AI counts text — roughly $\frac{3}{4}$ of a word. Mostly matters for length limits and pricing.

Context window

How much it can "hold in mind" at once. Bigger = you can paste longer documents.

Hallucination

When AI states something false with total confidence. Always verify facts.

System prompt

Hidden instructions that set the AI's behavior. You usually don't see it.

Multimodal

Can handle more than text — images, audio, files. Most modern tools are.

Chat / Thread

One ongoing conversation. It remembers everything within that chat.

Fine-tuning

Training a model on your own data. Advanced — skip it for now.

API

A way for apps to plug into the AI with code. For builders, not beginners.

Generative AI

AI that *creates* new things — text, images, video — rather than just sorting data.

Prompt engineering

The skill of writing prompts that get great results. You're learning it right now.

You don't need to memorize these. Bookmark this page and glance back. Within a week they'll feel like second nature.

How to write a prompt that works

Bad prompt in, bad answer out. The fix is a simple formula I use every day. Four ingredients:

1 Role

Tell it who to be. *"You are a friendly fitness coach..."*

2 Task

Say exactly what you want. *"...write a 7-day beginner plan."*

3 Context

Give the details. *"I'm 35, busy, no gym, 20 min a day."*

4 Format

Shape the output. *"As a simple table I can print."*

See the difference

✗ Weak: "Give me a workout."

✓ Strong: "You are a friendly fitness coach. Write a 7-day beginner workout plan for a busy 35-year-old with no gym and only 20 minutes a day. Give it as a simple day-by-day table, and keep it encouraging."

Same tool. Wildly different result. The strong prompt got a role, a clear task, real context, and a format. **Specific beats clever every time.**

Golden rule: if the answer isn't what you wanted, don't start over — just *reply* and refine: "Make it shorter," "More casual," "Add a grocery list." It's a conversation.

7 copy-paste starter prompts

Open any of the three tools, paste one in, and fill in the blanks. Instant momentum.

WRITE A POST

Write 3 short Instagram captions for [my business] about [topic]. Friendly tone, 1 emoji each, include a call to action.

EXPLAIN ANYTHING

Explain [confusing topic] to me like I'm 12, using a simple real-life example. Then give me 3 things most beginners get wrong.

SAVE TIME ON EMAIL

Write a polite, professional reply to this email saying [your point]. Keep it under 120 words. Here's the email: [paste it].

PLAN YOUR WEEK

I have these tasks: [list them]. Build me a realistic daily plan for the week as a table, with the hardest task first each day.

BRAINSTORM NAMES

Give me 15 catchy name ideas for [thing]. Mix short/punchy and creative. Add a one-line reason for each.

LEARN A SKILL

Act as my tutor for [skill]. Make me a 5-step beginner roadmap, and ask me 1 question to check I understood each step.

FIX MY WRITING

Improve this so it's clearer and more confident, but keep my voice. Don't make it stiff: [paste your text].

You just did the hard part.

You now know what AI is, where to click in all three tools, the words that matter, and how to write a prompt that actually works. That puts you ahead of most people. So... what now?

This guide was the appetizer. Inside **Taylormade Academy**, I go deeper — turning AI into real skills and real income: making content, building your brand, designing, shooting, editing, and even building simple AI tools of your own. Plus a community of creators figuring it out together.

Keep going — free

- **Join the community** at academy.taylormadecreative.net — it's free to start.
- **The Facebook group** — facebook.com/groups/taylormadeacademy. Ask questions, share wins, meet collaborators.
- **Go all-access** for the price of a pizza when you're ready for the full courses and ebooks.

One last thing

The people who win with AI aren't the smartest — they're the ones who **start**. You started today. Now go open one of those three tools and make something. I'll see you in the community.

— Nelson
